DETAILED ACTION

Terminal Disclaimer

1. The terminal disclaimer filed on 9/2/04 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of US Patent No. 6,823,391 has been reviewed and is accepted. The terminal disclaimer has been recorded.

Allowable Subject Matter

1. Claims 1, 2, 3-5, 7-12 and 15-33 are allowed. The following is an examiner's statement of reasons for allowance: Kay and Brown teach about utilizing a front-end and backend servers approach to increase efficiency and robustness of a distributed data system. In Kay and Brown inventions a client is allowed to access a copy of a public folder that is located on any of the backend servers. In prior art, the complication of deciding which of the backend server that will be handling a particular request is the burden of the front-end server "gateway" (Brown Col 9, lines 10-36). In applicant's invention, a client when accessing a public folder is directed to access one particular backend server, this function is taught at (Figure 4) (Page 18, line 23 to Page 21, line 5). With this approach, the front-end server requires less computation as the decision process is less complex when compare to the prior arts. The advantage in applicant invention is realized in the backend server having the ability to assist in the selection of other back end servers that are holding copies of the public folder. This approach reduces the burden on the front-end server and allows a more even distribution of the selection task among the back end servers.
